- Affiliated commissions; partner with baby retailers, banks, and earn a % when a user bus products, credit cards or insurance.
- One-time reports: specialised calculators for people who don't want to pay a full subscription

BMC Descriptive Justification

1. Key Partners

We chose our key partners based on who already connects with parents during their course of pregnancy or early family life. Healthcare providers such as hospitals, clinics, and midwives can recommend the platform as part of prenatal or postnatal care. Employers and HR teams are also important, as they can include BumpBudget in parental benefits packages. Banks and insurers are natural partners because they can provide products like savings accounts, insurance, or loans that parents often need. Baby retailers and childcare providers offer opportunities for affiliate partnerships and discounts. To build trust and credibility, we also see value in working with parenting organisations involved in family support. On the technical side, we will rely on hosting providers and payment systems to keep the service reliable and secure. Finally, influencers and parenting communities are key for reaching and engaging our target audience directly.

2. Key Activities

At BumpBudget we will focus on building and maintaining a comprehensive platform for parents. We aim to include the development of core tools such as budgeting planners, maternity leave trackers, and milestone monitoring. We place a strong emphasis on data management and security to protect sensitive user information. We also plan to integrate partners such as healthcare providers, insurers, and retailers to ensure accurate cost data and added benefits for users. Our website will provide educational resources on parental leave, costs, and financial strategies. Additionally, we will focus on marketing and partnerships to reach the target audience, and analytics and insights to continually improve the platforms and personalise recommendations for users.

3. Key Resources

The development of BumpBudget relies on a combination of solid technologies and strategic partnerships. We are using Django, a python framework, together with MySQL, a reliable database management system, to ensure we deliver efficient data handling and scalability. We aim to leverage Chart.js for dynamic data visualisations, enabling users to interactively explore their financial forecasts. We will integrate AI/ML algorithms that analyze user data and provide tailored financial insights to enhance the app's predictive capabilities. We are also developing a dedicated community platform that will foster peer support and knowledge sharing among users. Additionally, we will be establishing partnerships with healthcare providers and insurance companies for obtaining accurate cost data, which informs the platform’s budgeting tools and ensures users receive up to date and relevant information.

4. **Cost Structures**

   BumpBudget's main costs will come from several key areas that we have identified. Development costs include both frontend and backend, as well as implementation of AI models for predictive financial planning. Data acquisition and licensing are needed to access accurate healthcare and insurance costs. Marketing expenses cover social media campaigns and partnerships with hospitals, clinics, and partnering organisations to reach our target audience. Finally, we will dedicate resources to ongoing customer support with onboarding, troubleshooting, and using the platform effectively.

5. **Value Propositions**

   At BumpBudget we will offer an all in one financial planning platform specifically designed for expecting and new parents, integrating budgeting, savings, maternity leave planning, and milestone tracking. By doing this, we will help reduce parents' financial stress by providing a clear, organised view of income, expenses and upcoming costs. Users receive personalised insights tailored to their situation, alongside educational resources such as guides on parental leave, childcare costs, and financial strategies. Our platform ensures secure handling of user data, while also offering partner benefits, including discounts and relevant recommendations. Additional features include goal tracking with visual progress indicators, alerts for important deadlines and milestones, and a community support group to connect parents and share advice.

6. **Customer Relationship**

   At BumpBudget we are committed to holding strong connections with our users through a combination of personalised guidance and self service tools. Personalised guidance helps parents navigate budgeting, maternity leave, and milestone tracking based on their unique circumstances. Our platform offers a community support feature where users can connect, share experiences, and seek advice from other users on the same boat. Educational resources provide practical information on parental leave, childcare costs, and financial strategies. Automated alerts remind users of upcoming deadlines, milestones, and important financial tasks. Throughout our platform we prioritise trust and security, ensuring that all personal and financial data is handled safely while still enabling intuitive self service interactions.

7. **Channels**

   Our main delivery channel will be the BumpBudget web app, which parents can access anytime to manage their finances. To reach new users, we will work with health care providers like midwives and clinics who already support parents during pregnancy. Employers and HR departments are another important channel, as they can offer the platform to staff as part of maternity and paternity benefits. For awareness and engagement, we will focus on parenting forums, social media, and influencers, since parents often look online for advice and resources. App notifications will help us stay connected with users and deliver ongoing guidance. Finally, partnership with retailers and insurers can help distribute the app by bundling

it with relevant products and services. Together, these channels ensure that we can reach parents at the right time and provide ongoing support.

8. **Customer Segments**

We identified our main customer segments are expecting mothers in Ireland and new parents (0-2 years old) because these groups face some of the most immediate and unpredictable financial challenges, from pregnancy to infant care. Many families are also comparing public vs private maternity care costs, making choices that hugely impact their budgets. Young couples who are planning ahead for maternity leave and childcare expenses are another segment, since early financial planning can reduce stress later. We also include family support networks and partners in our target, because budgeting and decisions are often shared within households. Finally, financial advisors, insurance consultants, and healthcare providers may recommend BumpBudget as a trusted tool, so they serve as secondary but influential customer segments

9. **Revenue Streams**

Our main source of income will come from a ‘freemium subscription model’: basic tools are free, but users can pay for premium features like detailed maternity leave forecasts and advanced savings tracking. For those who don't want a subscription, we will also offer one off paid tools and reports, such as baby expense calculators. On top of this, affiliated partnerships with baby retailers, banks, and insurers give us a way to earn commission without adding extra cost for users. Looking at bigger opportunities, we could sell B2B licenses to employers, HR teams, or insurers who want to provide the platform as a benefit. Finally, in the long run, we could generate revenue from anonymised market insights, which could be valuable for brands and researchers while keeping user privacy secure. This mix of revenue streams makes the business more flexible and sustainable.

Value Proposition Canvas (VPC)

VPC Descriptive Justification - B2C

Bump Budget

VPC

B2C

Value Proposition

▸ Products & Services
- Bump budget web & app
- Personalised dashboard for financial maternity journey
- Insurance Simulator

- Step by step financial plans personalised to users due date and income.
- Confidence for decision making and financial planning.
- Easy access to trusted recources and financial advice .
- Ongoing support.
- Neutral advice (not tied to insurers)

1. Customer Profile

a. Jobs

In life all parents face four main financial jobs they need to focus on during this stage of life. First, they need to plan household finances during maternity or paternity leave. When income is reduced or paused, families need a clear way to adjust spending and avoid falling into debt. Second, they must budget for new baby related expenses. Costs like hospital fees, baby gear, and childcare are often underestimated, so parents want a system to anticipate and track these new outgoings. Third, parents have to track key milestones and deadlines such as due dates, check ups, medical appointments, or the start and end of leave, since these affect financial timing. Lastly, they need a way to access trusted advice in one place, instead of piecing together scattered, generic tools.

b. Pains

Expecting and new parents face several financial pains. The biggest is loss of income during leave, which creates pressure on household budgets. They also deal with unexpected costs such as medical fees, baby gear, and childcare deposits that quickly add up. On top of this, many parents feel overwhelmed and stressed trying to manage finances while preparing for a baby. Finally, most budgeting tools aren't tailored to parental leave, leaving them with generic advice that doesn't fit their situation.

c. Gains

New and upcoming parents want financial clarity and peace of mind. They value having a clear forecast of income and expenses during leave, along with personalised strategies that fit their salary, due date, and goals. A big gain is reduced stress, knowing they're financially prepared. They also want convenience, with all tools and advice in one place instead of juggling apps or spreadsheets.

2. Value Proposition

a. Products & Services

BumpBudget provides a comprehensive web and mobile platform designed to guide parents through the financial aspects of pregnancy and early parenthood. Our platform features a personalised dashboard that tracks the user's financial journey, including budgets, upcoming expenses, and maternity milestones. An insurance simulator helps parents understand and compare public, private and semi-private healthcare options, while the income forecasting tool predicts changes in take home pay during maternity leave. Our platform will also include community forums and support groups, allowing parents to share experiences and advice, checklists and reminders will help users stay on top of appointments, benefits, and essential tasks.

b. Pain Relievers

BumpBudget addresses common challenges that expecting and new parents face by providing transparent breakdowns of public, private, and insurance costs, helping users avoid unexpected expenses. Scenario planning allows families to forecast different financial paths and make informed choices, reducing stress. Community support reduces feelings of isolation by connecting parents with users experiencing similar steps, such as benefits applications, appointments, and milestone tracking, are never missed helping families

c. Gain Creators

BumpBudget helps users achieve peace of mind by enabling proactive financial planning, giving parents confidence in managing costs and preparing for the future. By offering real cost comparisons, our platform supports stronger, data driven decision making around healthcare and childcare options. Emotional wellbeing is enhanced through engagement with user groups and community support, while the long term view of the baby related costs allow families to plan beyond immediate expenses, helping them make more informed financial choices over time.

VPC Descriptive Justification - B2B

Bump Budget

VPC

B2B

Value Proposition

▸ **Products & Services**
- Corporate dashboard (aggregate, anonymized insights)
- Educational resources and financial tools
- Insurance simulator for public/private/semi-private care
- Personalized alerts and milestone trackers
- Optional branding/customized content

▸ **Pain Relievers**
- Reduces employee stress over maternity finances
- Decreases repetitive queries to HR/insurance support
- Guides users through leave, benefits, and insurance scenarios

▸ **Gain Creators**
- Improves employee retention and engagement
- Strengthens client relationships for insurers
- Provides anonymized usage insights for program improvement
- Demonstrates commitment to family-friendly policies

Customer Profile

Customer jobs
- Manage finances during pregnancy and early parenthood.
- Track maternity leave income and childcare costs.
- Stay on top of appointments, benefits, and baby milestones.
- Get advice and support from peers or professionals.

▸ **Customer Pains**
- Uncertainty about healthcare and childcare costs.
- Risk of unexpected bills or income changes.
- Overwhelm from scattered information.
- Lack of guidance on insurance and maternity options.

▸ **Customer Gains**
- Peace of mind with clear income and expense tracking.
- Make informed decisions with scenario planning.
- Emotional support via community forums.
- Easy tracking of milestones, appointments, and benefits.

3. Customer Profile

a. Jobs

Expecting parents and new families face multiple responsibilities as they navigate pregnancy and early parenthood. They need to manage finances effectively, track maternity leave income and childcare costs, and stay on top of appointments, benefits, and baby milestones. Through our platform, we aim to support users in all these areas, providing tools that simplify complex planning and allow them to focus on their growing family rather than worrying about scattered information. Additionally, our community features allow parents to get advice and support from peers or professionals, ensuring they feel guided throughout their journey.

b. Pains

Many expecting parents experience uncertainty around healthcare and childcare costs, particularly when comparing public, private, or semi-private options. Unexpected bills or changes in income during maternity leave can add significant stress. Information is often scattered across multiple sources, leaving parents feeling overwhelmed, and guidance on insurance and maternity options is limited. We address these pains by consolidating financial, healthcare, and benefit information in one accessible platform, giving users clarity and confidence in their decision-making.

c. Gains

Through our solution, parents gain peace of mind by tracking income and expenses in a clear and visual way. Scenario planning tools allow families to make informed decisions about healthcare, childcare, and insurance, reducing the risk of surprises. Emotional wellbeing is further enhanced via community forums, giving parents a safe space to connect, share experiences, and seek advice. Finally, milestone, appointment, and benefit trackers make it simple to stay organized and proactive, helping parents feel in control throughout the maternity journey.

4. Value Proposition

a. Products & Services

Our platform includes a corporate access dashboard, allowing HR teams to monitor aggregate engagement without accessing personal user data. Employers and insurers can integrate educational resources, personalised tools, and scenario based planners to assist employees or clients. Optional features include branded content, custom alerts for policy updates, and anonymised analytics on usage patterns to inform support programs or benefit offerings.

b. Pain Relievers

BumpBudget alleviates common pain points for organisations, such as employee stress over maternity leave or the administrative burden of explaining complex insurance coverage. We reduce internal queries by guiding users through cost comparisons, leave forecasts, and benefits planning automatically, providing our platform as a trusted support tool for staff.

c. Gain Creators

Organisations benefit from higher employee satisfaction, reduced stress, and more informed decision-making among staff or clients. We allow employers to highlight our tool as part of a family-friendly benefits package, while insurance companies strengthen client relationships and provide a value-added service. Data insights from our platform help companies refine offerings, enabling them to better tailor programs to employee or client needs over tim
